

# HUSCO

## CASE STUDY

### Meet Husco

Husco is a privately-owned global leader in the manufacturing and development of high-performance hydraulic and electromechanical components that power some of the most advanced off-highway and automotive applications. They pride themselves on collaborative relationships with their customers, doing so efficiently, reliably, and at the highest possible levels of performance.

**"Macrium Customer Service – It is Top Tier"**  
**Husco views Macrium as a trusted partner that sets them apart**

### When Production Can't Wait

For automotive and off-highway manufacturers like Husco International, production line downtime isn't just an IT issue – it's a direct revenue loss. With legacy systems running critical operations, reliable recovery solutions aren't just nice to have – they're essential.

Before Macrium, Husco's IT team battled with unreliable backups and slow recovery times that could see their production halted for up to 8 hours. With SiteBackup, Husco has cut their system recovery time down to 40 minutes, getting manufacturing lines back online in minutes rather than hours.

### From 8 Hours to 40 Minutes: How Macrium Solved Husco's Legacy System Backup Challenge

Join Reid Schneider, Systems Application Administrator, and William Johnson, Senior IT Technician at Husco as they reveal how their partnership with Macrium transformed downtime.

## Recovery from Hours to Minutes

"As an auto and off-highway manufacturer, we deal with Windows XP, Windows 7, and a lot of legacy software that we have throughout our company," explains William Johnson.

For manufacturing environments like Husco's, these legacy systems are critical but increasingly challenging to protect as they age and vendor support diminishes.

SiteBackup's comprehensive compatibility with older operating systems made it the ideal solution for Husco's diverse manufacturing environment.

Listen to Reid Schneider, Systems Application Administrator, explain how this 83% improvement built trust across the organization and keeps production lines running efficiently day after day.
