

Macrium Reflect LTSC

No Updates. Full Control. Long-Term Stable Backup and Recovery.

Macrium Reflect LTSC (Long-Term Servicing Channel) is a stable backup and recovery solution designed for OEMs and embedded system providers. It is built for long-term field deployment where minimal change is critical and ongoing updates are not practical.

Why Choose Reflect LTSC?

With a static feature set and proven image-based backups, LTSC delivers stability and control. Licensing is tailored to OEM needs, and by locking in known behavior from day one, it helps avoid retesting, revalidation and compliance overhead.

Long-Term Stability

A static feature set means there are no unexpected changes or upgrade cycles. This is ideal for validated systems where even minor updates can introduce risk and require revalidation.

Less Maintenance Overhead

Updates are limited to security patches and critical bug fixes only. With no features updates, there is less need for testing and deployment, reducing the maintenance burden in the field.

Licensing Fit For OEMs

Simple, one-time-purchase licensing with offline activation makes it easy to roll out, manage and support your products at any stage of growth.

- ✓ One-time-purchase (perpetual) licensing of a Reflect LTSC 2024 edition license for workstation, server or server plus.
- ✓ No features updates and no UI changes.
- ✓ 3 years maintenance for security updates and bug fixes only.
- ✓ Optional support agreements and enterprise support plans available.
- ✓ Volume based licensing and 5 year maintenance agreements available.

Backup and Recovery You Can Trust

Built on the Reflect 8.1 platform which is trusted in thousands of critical environments across the world.

Full Disk Imaging

Create complete backups of the operating system, settings and applications for reliable full-system recovery.

Rapid Delta Restore (RDR)

Restore only changed data blocks to reduce recovery time (RTO) and minimize downtime.

Backup Security by Design

Protect backups with Macrium Image Guardian (MIG) and AES encryption against ransomware and unauthorized access.

Offline Ready

Operates fully without internet access to support remote, air-gapped or secure deployments.

Easy Deployment

Use interactive or command line tools for installation and backups across large volumes of systems.

System Requirements and Compatibility

- Win XP SP3/Server 2003 SP2 and newer.
- Some features may not be available on Win 7 or earlier.
- See Macrium Knowledge Base for full details.

The competitive edge that Macrium gives us is that now we're able to recover software or image issues remotely, which is truly unheard of in our industry. We were able to save approximately 50% in labour related to software reimaging issues.

Jose Rivera

VP of Service and Support, Sysmex America

Is Reflect LTSC Right for You?

Reflect LTSC is ideal if you need stability, long-term consistency and minimal change. It may not be the right fit if your focus is rapid innovation, feature updates or centralized control.

Need Centralized Management Instead?

Use Macrium SiteBackup for centralized backup and recovery management across multiple systems.

- ✓ Central console for backup management across multiple sites and systems.
- ✓ Centralized agent deployment, updating, and license management.
- ✓ Real-time dashboards, data exports and notifications to keep you informed.
- ✓ Flexible licensing with one time purchase and annual plan available.
